

Don't just imagine it, see it.

This is the Context Card.
Use it with the Tylko app
to see your design live in
your space.

Tylko is currently available for iOS.
An Android version is on the way.

Take the Context Card to your desired space and open the Tylko app.

1 Position is everything.

The Context Card must be placed on the flat surface where you want your piece to appear and in view of the camera. Stand roughly a meter away and point the camera at the Context Card.

2 Let some light in.

This magic, called Context View, works best in well-lit spaces. Open a curtain or turn on a light.

3 Add more detail.

Place some objects next to the Context Card to help Context View assess your space. The app works better when it sees more objects.
